Megawide Precast unit increases capacity for infrastructure, supply-and-build contracts

(L-R: Megawide Chief Human Resources Officer Maria Belinda Morales, Megawide Chief Operating Officer for EPC Frederick

applying a methodology that enables faster curing time for its precast elements, able to manufacture higher production loads within a shorter period.

Producing precast components in a factory setting ensures higher standardization and lessens the need for manpower by removing conventional works. It is also more environmentallyfriendly compared with traditional methods, as it reduces the use of lumber for on-site casting
